

PEOPLE'S HOSPITAL

MULTI SPECIALITY

(Managed by : People's Progress Trust)

State Government Empanelled Hospital

DISCHARGE SUMMARY..

Patient Name	: Mr. APPA RAO AREMANDA	Admission No	: IP12976
Age/Gender	: 45 Years/Male	UMR No	: UMR360889
Consultant	: Dr.RAHUL .D	Ward	: SINGLE NON A/C/S5
Department	: GASTRO ENTEROLOGY	Admitted Date	: 12-Mar-2026 9:25 pm
Address	: F.NO.201,P.NO.224 -227,KUNCHA ENCLAVE,MITHILA NAGAR,PRAGTAHI NAGAR HYDERABAD , TELANGANA 9000017580	Discharge Date	: 14-Mar-2026 9:20 pm

CONSULTANTS : Dr.RAHUL
MD.DM(OSM)
DR.VISHNUKUMAR
GEN SURGEON,ONCO SUR

FINAL DIAGNOSIS : ACUTE CALACULOUS CHOLECYSTITIS

PROCEDURE/SURGERY : Conservative managment

GENERAL EXAMINATION : Patient Conscious oriented.
Afebrile
BP :120/80mm/hg.
Pulse Rate : 84/min.
Systematic Examination:
RS :Bilateral air entry adequate clear.
CVS : S1+,S2 ,no murmurs.
P/A : Soft, no tenderness.

PRESENTING COMPLAINTS : 45 Years old male patient admitted with complaints of sever pain abdomen
.Right upper abdomen pain ,severe vomiiings.

HOSPITAL COURSE : Patient admitted with above complaints .CECT abdomen done s/o
acalaculous cholecystitis .I/V/O Acalaculous cholecystitis surgeon opinion

PEOPLE'S HOSPITAL

MULTI SPECIALITY

(Managed by : People's Progress Trust)

State Government Empanelled Hospital

obtained suggested for lap cholecystectomy ,attenders and patient not ready for surgery .Patient has been treated with Iv fluids, Iv antibiotics, Iv ppi's, and other symptomatic medication with strict monitoring of vitals.Patient is being discharged in hemodynamically stable condition with following IV injections as discharge advice ,if pain recurs or worsens in severity the patient is advised to report to the ER .

INVESTIGATIONS :

: UGIE ,CBP,SERUM ELECTROLYTES ,SERUM CREATININE ,CECT ABDOMEN

DISCHARGE ADVICE :

: 1.INJ.MAGNEXFORTE 1.5GM /IV/TWICE DAILY 3DAYS
2.INJ.METROGYL 500MG /THRICE DAILY 3DAYS
3.INJ.PAN 40MG/IV/ONCE DAILY 3DAYS
4.TAB .DROTIN TWICE DAILY /SOS

DEPARTMENT OF RADIOLOGY AND
IMAGING

Ultrasound - Abdomen & Pelvis Male

FINDINGS :

LIVER : Normal in size (12.9 cm) **with increased echotexture**. No focal lesions. Intrahepatic biliary and vascular radicles are normal. Portal vein and CBD are normal.

GALL BLADDER : Well distended. No evidence of calculi. **Diffuse echogenic debris noted involving entire lumen of gallbladder. Mild gallbladder wall thickening noted of maximum thickness measuring 6 mm.**

SPLEEN : Normal in size (9.8 cm) and echotexture. No focal lesions noted.

PANCREAS : Visualized portion appears normal in size and echotexture. No ductal dilatation/calcifications to the visualized extent.

KIDNEYS : Normal in size and echotexture. Corticomedullary differentiation well maintained. Pelvicalyceal system is normal. No evidence of calculi.

Right Kidney measures 11.0 x 5.0 cm. Left Kidney measures 10.8 x 5.9 cm.

URINARY BLADDER : Well distended. No evidence of wall thickening / calculi.

PROSTATE : Normal in size and echotexture. Measures: 3.1 x 4.2 x 3.0 cm, Volume: 21 cc.

No free fluid seen in abdomen.

Gaseous distended bowel loops noted.

IMPRESSION:

* Grade I fatty liver.

Diffuse echogenic debris involving entire lumen of gallbladder.

* Mild gallbladder wall thickening.

-- Likely acute cholecystitis with echogenic debris / ? Porcelain gallbladder.

SUGGESTED CLINICAL CORRELATION & FURTHER EVALUATION.

This is an amended report, and this supersedes the report dated 08-Mar-26 Time 12:05 PM, and the preceding report is declared as null and void.

CT SCAN OF ABDOMEN WITH IV & ORAL CONTRAST

Technique:

Multislice CT of abdomen with IV and oral contrast was performed on Light Speed VCT 16 slice, detector collimation 0.625 mm, using 60ml of non ionic IV contrast, 5/5 mm reconstructions in sagittal & coronal planes.

Findings:

Liver is *mildly enlarged in size (CC diameter measures ~17.2 cms)* and shows normal attenuation, no focal lesions.

CBD and portal vein are normal. No IHBRD. Hepatic veins and IVC are normal.

Gall bladder: *Over - distended, measures ~92 x 42 x 38 mm (AP x TR x CC) with diffusely thickened walls noted (Maximum wall thickness of about 6.3 mm). No obvious hyperdense calculi. Significant pericholecystic fat stranding noted. Significant thickening of latero-conal fascia noted on right side.*

Pancreas is normal in size and attenuation, MPD is normal in caliber.

Spleen: Normal in size and attenuation.

Both kidneys: Normal in size and attenuation. CMD is maintained.
No focal lesions. No calculi. PCS and ureter are normal.

Aorta, IVC, adrenals, mesentery and omentum are within normal limits.

Urinary bladder is nearly empty.

Prostate and seminal vesicles are normal.

Contrast filled stomach, small bowel, large bowel loops are grossly normal.

No ascites.

Appendix is normal.

Processed at : KPHB, Kukatpally
Name : Mr.A APPA RAO
Age/Gender : 45 Years / Male
Ref. Dr. : PEOPLES
HOSPITAL(PRAGATHI
NAGAR)

Bill No. : KHB265610
Bill Date : 13-Mar-26 10:01 AM
Reported On : 13-Mar-26 12:25 PM

IMPRESSION:

* Mild Hepatomegaly.

* Gall bladder is over-distended with diffusely thickened walls noted (Maximum wall thickness of about 6.3 mm). No obvious hyperdense calculi. Significant pericholecystic fat stranding noted. Significant thickening of latero-conal fascia noted on right side.

- Above F/S/O Acalculous Cholecystitis.

Note : All Gall bladder calculi cannot be detected on CT - Suggested USG abdomen to rule out any gall bladder calculi.

- SUGGESTED CLINICAL CORRELATION & FOLLOW-UP

**Amylase, Serum**

SampleType: Serum

Department of Clinical Biochemistry

INVESTIGATION	RESULT	UNITS	BIOLOGICAL REFERENCE INTERVAL
---------------	--------	-------	-------------------------------

Amylase-Serum

52.9

U/L

22-80

Method: CNPG3

Clinical Significance: Amylase

- Amylase is produced in the Pancreas and most of the elevation in serum is due to increased rate of Amylase entry into the blood stream or decreased rate of clearance or both.
- Amylase rises within 6 to 48 hours of onset of Acute pancreatitis in 80% of patients, but is not proportional to the severity of the disease.
- Activity usually returns to normal in 3-5 days in patients with milder edematous form of the disease.
- Values persisting longer than this period suggest continuing necrosis of pancreas or Pseudocyst formation.
- Hyperlipemic patients with Pancreatitis also show spuriously normal Amylase levels due to suppression of Amylase activity by triglyceride.
- Low Amylase levels are seen in Chronic Pancreatitis, Congestive Heart failure, 2nd & 3rd trimesters of pregnancy, Gastrointestinal cancer & bone fractures.

Contact	9000017580	Sample Accepted	08-Mar-26 / 01:54 PM
Collection Centre	INTGHD95146	Sample Reported	08-Mar-26 / 03:22 PM
Referral Doctor	raju	Report Status	Final

Liver Function Test (LFT)

Sample Type: Serum

Department of Clinical Biochemistry

INVESTIGATION	RESULT	UNITS	BIOLOGICAL REFERENCE INTERVAL
Bilirubin Total Method: DPD Diazotization	0.93	mg/dL	0.3-1.2
Bilirubin Direct Method: DPD Diazotization	0.30	mg/dL	0.0-0.20
Bilirubin Indirect Method: Calculated	0.63	mg/dL	0 - 0.8

Clinical Significance : Total Bilirubin

- **Prehepatic Jaundice** : Diseases of prehepatic origin with predominantly unconjugated hyperbilirubinemia
 - a) Corpuscular haemolytic anemias e.g. thalassemia and sickle cell anemia;
 - b) Extracorporeal haemolytic anemia e.g. blood transfusion reaction due to ABO and Rh incompatibility;
 - c) Neonatal jaundice and haemolytic disease of the newborn.
- **Hepatic Jaundice** : Diseases of hepatic origin with predominantly conjugated hyperbilirubinemia include acute and chronic viral hepatitis, liver cirrhosis and hepatocellular carcinoma.
- **Post hepatic Jaundice**: Diseases of post-hepatic origin with predominantly conjugated hyperbilirubinemia include extrahepatic cholestasis and liver transplant rejection.
- Chronic congenital hyperbilirubinemias include the unconjugated hyperbilirubinemias Crigler-Najjar syndrome and Gilbert's syndrome as well as the conjugated hyperbilirubinemias Dubin-Johnson syndrome and Rotor syndrome.

Clinical Significance : Direct Bilirubin

- The assessment of direct bilirubin is helpful in the determination of hepatic and post-hepatic jaundice.

Alanine Aminotransferase (ALT/SGPT)

26.5

IU/L

0-50

Method: UV Kinetic IFCC without P5P

Clinical Significance : Alanine Aminotransferase (ALT)

- **Elevated serum ALT activity is mainly regarded as an indicator of parenchymal liver disease.**
- Increased serum levels indicate deterioration in the integrity of the hepatocyte plasma membrane.
- ALT has greater diagnostic sensitivity for hepatobiliary disease than AST.
- Activities >50 times the upper reference limit are mainly associated with acute viral hepatitis, acute disorders of liver perfusion and acute liver necrosis due to ingestion of toxins including paracetamol and carbon tetrachloride.
- Markedly elevated serum ALT levels is found in hepatitis, mononucleosis and cirrhosis.
- Levels greater than 15 times the upper reference limit are indicative of acute hepatocellular necrosis of viral, toxic or circulatory origin.

Aspartate Aminotransferase (AST/SGOT)

24.8

IU/L

0-50

Method: UV Kinetic IFCC without P5P

Note: Please contact us for possible remedial action if test results are unexpected

Abnormal Critical

Name	A APPARAO	Order	PTGOC2601115354
Age / Sex	45 years / Male	Sample Drawn	08-Mar-26 / 08:50 AM
Contact	9000017580	Sample Accepted	08-Mar-26 / 01:54 PM
Collection Centre	INTGHYD95146	Sample Reported	08-Mar-26 / 03:22 PM
Referral Doctor	raju	Report Status	Final

Liver Function Test (LFT)

SampleType: Serum

Department of Clinical Biochemistry

INVESTIGATION	RESULT	UNITS	BIOLOGICAL REFERENCE INTERVAL
---------------	--------	-------	-------------------------------

Clinical Significance : Aspartate Aminotransferase (AST)

- Measurement of AST is indicated in the diagnosis, differentiation and monitoring of hepatobiliary disease, myocardial infarction and skeletal muscle damage.
- AST levels may be increased in viral hepatitis and liver disease associated with hepatic necrosis, with 20 to 50 fold elevations frequently encountered.
- The evaluation of AST activity in relation to ALT (De Ritis ratio; AST/ALT) is a useful indicator of liver damage.
- Ratios > 1.0 are indicative of severe liver disease, usually involving necrosis.
- Ratios < 1.0 are indicative of mild liver damage associated with inflammatory conditions.

Alkaline Phosphatase (ALP)

98.4

IU/L

30-120

Method: pNPP AMP Buffer IFCC

Clinical Significance : Alkaline Phosphatase (ALP)

- Increases in total ALP are either due to physiological causes, or are caused by diseases of the liver or bone.
- Physiological increases in ALP are found in pregnancy from the 2nd trimester onwards due to placental ALP, in growing children due to bone ALP and postprandially in individuals with blood groups B and O, who are secretors of blood group substance H (intestinal ALP).
- **Most common cause of elevated ALP is hepatobiliary disease.**
- **Primary bone diseases with elevated ALP** : osteomalacia, osteogenesis imperfecta, vitamin D intoxication and primary bone tumours.
- **Secondary bone diseases with elevated ALP** : skeletal metastases, and in diseases such as multiple myeloma, acromegaly, renal insufficiency, hyperthyroidism, ectopic ossification, sarcoidosis, bone tuberculosis and healing fractures.

**Liver Function Test (LFT)**

SampleType: Serum

Department of Clinical Biochemistry

INVESTIGATION	RESULT	UNITS	BIOLOGICAL REFERENCE INTERVAL
---------------	--------	-------	-------------------------------

Clinical Significance : Albumin

- Measurements of albumin concentrations are vital to the understanding and interpretation of calcium and magnesium levels because these ions are bound to albumin, and decreases of albumin are directly responsible for depression of their concentration
- Hyperalbuminemia is infrequent and is caused by severe dehydration and excessive venous stasis.
- Hypoalbuminemia due to impaired synthesis : Liver disease or in protein deficient diets.
- Hypoalbuminemia due to increased catabolism : Tissue damage and inflammation
- Hypoalbuminemia due to reduced absorption of amino acids : Malabsorption syndromes or malnutrition.
- Hypoalbuminemia due to protein loss : Nephrotic syndrome, enteropathy or burns.
